Response to Arguments

1. Applicant's amendment filed on 19 July 2005 has been entered.

Applicant's response to the rejection of the last Office action places the application in condition for allowance, and, therefore, the finality of that action is withdrawn.

Reasons for Allowance

2. The following is an examiner's statement of reasons for allowance: Reasons for allowance of Claim 49 has already been provided in the Office Action mailed 20 May 2005. Although it is known to introduce a heat transfer gas between a substrate and a chuck, claims 1 and 25 are allowable because the prior art fails to teach or fairly suggest a method and an apparatus including calibration of an electromagnetic device and means for creating a calibration curve for a substrate on a substrate support structure including a chuck, including measuring the chuck temperature as claimed by Applicant in the absence of a plasma and then determining a temperature of said substrate during plasma processing in said plasma processing system, in combination with the other limitations of the respective claims.

Claims 2-24 and 26-48 are allowable by virtue of their dependency upon the respective of Claims 1 and 24.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The prior art cited in the form PTO-892 and not mentioned above disclose related temperature measurement devices and methods.

Art Unit: 2859

- a. US 5676205 A (WHITE), US 5270266 A (Hirano; Yoshihisa et al.), and US 5350479 A (Collins; Kenneth S. et al.) are cited for teachings related to use of heat transfer gas between a chuck and a substrate.
 - b. US 6063234 A (Chen; Jian Janson et al. and US 6709519 B (Yaroslavsky) are cited for disclosure of in-situ temperature measurement of a substrate in a plasma processing environment.
